**Figure 2.4 Kleopatra: The Decrypt and Verify Files Dialog**

Click **Decrypt/Verify** to check the file. The two most common results look like the following figure; although the yellow warning may look problematic, the following means that the file check passed with success. You may now run this installer.

**Figure 2.5 Kleopatra: the Decrypt and Verify Results Dialog: All operations completed**

Seeing a red `The signature is bad` error means the file is invalid. Do not execute the MSI file if you see this error.
